Q: Why am I getting this error when using a Sequence Number with Azure Mobile Services I am trying to use a sequence number as a primary key for my tables in a mobile services app, I was following the instructions in the Azure documentation for the SequenceNumberColumn on the client side. When I try to build the client I am getting the error: Error generating AndroidManifest.xml: Found multiple occurrences of the same identifier "sequence". This is invalid. The identifier "sequence" is reserved. You can use a different identifier. However, if I use any other column as the primary key, or use any other column as the id, I do not get any errors. Here is my mobile client code: @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(2d92ce491b
