Tiger Woods PGA TOUR 12: The Masters/Game/PS3/PC/DVD/PS2/Video Game/Forum: Product Features. Dell's top-end XPS 15 is a very capable laptop and a great option if you want a large screen and the latest processor.'s latest iteration, the T15, has some interesting upgrades, including a faster thermal solution, the quad-core Intel Celeron J3355 processor, and Nvidia graphics. Now that you've got the four components of the PC, let's talk about the operating system. Like all operating systems, Windows has to do a lot of things behind the scenes, from processing basic input and output to running your programs and controlling your peripherals. The most powerful PC can run only a single operating system at a time. If you're running more than one, they have to share resources. Each operating system needs to take up as much space as possible. Think of the computer as a massive smart phone. The iPhone 7, for instance, needs to be compact to allow it to be put into a pocket. computer core specifications A computer's operating system. What it does? Other things the OS does are manage the computer's resources, such as the memory and CPU cycles, among other things. Related articles A processor is the heart of your computer. If your computer is in use, the processor is working all the time. It's the processor that runs your programs, hardware such as keyboards and mice, and even fans that keep your computer running. While it's true that every computer has a 2d92ce491b
