Canne's Principles of Surgery, 7th Edition.The metabolite 7-keto-6-deoxyhypoxanthine and its derivatives in a hepatocyte culture: studies with animal serum and human serum. The formation of adenine nucleotides from the substrate, 7-keto-6-deoxyhypoxanthine, was studied using rat hepatocyte cultures. A major metabolite was identified as 7-keto-6-deoxyhypoxanthine. Its formation was inhibited by the adenosine deaminase inhibitor, EHNA. The formation of 7-keto-6-deoxyhypoxanthine was not inhibited by p-hydroxymercuribenzoate or mercuric ions. After correction for its possible conversion to the corresponding nucle
