Monitor your battery life on Xbox controllers from the system tray. Keep a close eye on your Xbox controllers' battery life and receive low power alerts. Features: Monitor your Xbox controllers' battery life. Keep a close eye on your Xbox controllers' battery life and receive low power alerts. XInput Battery Meter displays notifications whenever a device is connected or disconnected, as well as when its battery level gets dangerously low. Description: Add a "reset" to your webcam's default setup screen, to ensure that there are no leftover artifacts or flickering. Very useful for webcam owners who have been using the camera for a long time, or when they need to update their browser's default setup screen. Very simply, this application will replace the webcam's "reset" default setup screen with one of its own. Usage example: XInput auto-reset is a small application designed to help webcams and other input devices that use the XInput API. When an application reads or writes to the webcam's control registers, the webcam will be reset by a combination of a hardware reset and a software reset. If a user wishes to have any custom information stored in the webcam's control registers, this will need to be reinitialized in order to ensure that the application's content is not overwritten. Although this is a very small application, it can provide some benefits to webcam users who are looking for a quicker way to reset their webcam, and does not require the use of a scripting or other software language. Introduction When an application reads or writes to the webcam's control registers, the webcam will be reset by a

combination of a hardware reset and a software reset. If a user wishes to have any custom information stored in the webcam's control registers, this will need to be reinitialized in order to ensure that the application's content is not overwritten. This is very helpful to those who frequently update the webcam's setup screen, or those who wish to apply a custom background or similar modifications to the webcam's default setup screen. Requirements This application can be used with any XInput enabled webcam or input device. Installation You will need to have the XInputLib installed, along with the correct XInput headers, in order for the application to run. These can be obtained from the aforementioned website. After you have installed the correct header
