Recursive Delete is a Java-based application capable of recursively deleting files and folders from the computer which cannot be otherwise removed using the Windows built-in features. It doesn't include complicated options or configuration settings, making it accessible to all types of users, even those experienced with such tools. Simple GUI and

options When it comes to the interface, Recursive Delete adopts a small window with a simple and straightforward design, where you can resort to the built-in browser to locate and add a folder to the task list. All containing subfolders and files, along with the root directory are taken into account for the deletion operation, which is executed with the click of a button. Unfortunately, there

are no options implemented for creating a list with items to include in the task while sparing the rest, or the other way around. The job is quickly carried out. No setup necessary, besides Java As long as you have Java installed, you don't need to set up anything else. This means that you can copy the downloaded.jar file to a preferred directory on the disk or on a removable storage unit,

in order to directly launch it on any PC with Java. It doesn't make any changes to the system registry, or create files on the disk without your permission. In order to uninstall it, you simply have to delete this file. Evaluation and conclusion It worked smoothly in our tests, without triggering the OS to hang, crash or indicate errors. It left a small footprint on the computer's performance, thanks

to the fact that it needed a low amount of CPU and RAM to work properly. On the other hand, Recursive Delete has a poor lineup of features and doesn't bring anything new to the table. Nevertheless, you can test it for yourself. Stronghold, is the ideal tool for house cleaning tasks, without the need to pay the Windows specialist a visit. graphite fiber. A novel method for the direct microextraction of organophosphorus (OP) and organonitrogen (N-OP) pesticides from aqueous samples using an organosilicone graphite fiber (OGF) was developed in this work. The influence of extraction variables, including type and volume of solvents, extraction time, as well as pH and salt effect was investigated and

optimized. A different selection of extraction solvents was obtained with the optimization. The extracted OGF was then directly injected into a gas chromatography-

There are no mountains or trees where Martin's high-rise condo is nestled. The bright-orange building is home to some of Martin's neighbors — approximately 20 people, he said. It's also the home of a drug

cartel. "I can't go down there," Martin said. "I'm not allowed to go down there. If I get pulled over by police, it'll be a situation where it'll blow up on the news, and I don't want that." The homeowner has taken precautions to keep the
