All of these Direct3D 10 issues are common even on Windows 2000. steam api.dll Gfa File not Found Issue. How to solve the steam api.dll error in your computer I have tried everything, also went to the application and tried to uninstall and reinstall and re-register the game. Downloaded the new steam and steam_api.dll files and tried again. Tried reinstalling the games from scratch. A complete reset. If I find any solution to this issue, I will post. As for now I have given up. Thank you, A: In 2016, I was confronted with an error when trying to launch Mirror's Edge Catalyst. The main issues were: The steam_api64.dll issue, in my case it was Steam_api.dll (I'm using Windows 10) Using the 32bit version of Catalyst while running a 64bit Windows. The first error is related to the Steam API DLLs, as Dmitry declared in this answer. The second error is usually related to software incompatibility between the 64 bit version and the 32 bit version. The solution was to download the 64 bit version of the software. Thanks, as always, to Paul Freund for creating this article, and to Logan Bennett for translating it into English. It seems like the most recent installment of the Windows 10 March Release Preview was issued to Windows Insiders just last night. While we're still waiting for the official Windows 10 release, we've checked out the new things that have been added to the final build. While many of these features have been seen before, we've highlighted some that are worth noting, either for the first time,

or that might be interesting enough to warrant a repeat after the official release: Windows Ink. If you like to use pen-based input devices on Windows, you're in for a treat. While the ability to preview the ink you're creating is already there in the Windows 10 March Release Preview, the new build now includes the ability to edit the live ink strokes in real-time. Of course, it's only compatible with the new build of the Edge browser, and it's experimental right now. Note: the new Windows Ink on the web feature is available as an experimental feature and should not be considered as a replacement of the native ink tool on the desktop.
