Q: Mysql performance between InnoDB and MyISAM I wanted to know if InnoDB is faster than MyISAM with respect to SELECT and LOAD DATA. What I observed on my tables is that if the table is InnoDB, when a DML operations is performed, and the data is not frequently modified, the performance is satisfactory. However, when the data is frequently modified, the performance is affected. To clarify, tables have been set with InnoDB as their engine and have been modified with MERGE or LOAD DATA operations with a lots of modification. As an experiment, I set the table engine to MyISAM and after modification, I retried the DML operations. The result was not what I expected, since performance dropped considerably. A: MyISAM is only an InnoDB plugin and it has its own caveats/limitations. By using InnoDB, you are getting the goodies from InnoDB/MyISAM and also the benefits of all the MyISAM stability/usability 1cdb3666d
